Note 1: Pesticides not listed in the Table, except for those import tolerances developed, shall not be detected.

Note 2: Both the MRLs (ppm) and the actually examined residues of pesticides are calculated on the basis of the weights of the produces in the forms on market.

Note 3: The examination of pesticide residues shall include the pesticide itself and its metabolites.

Note 4: The MRLs of dithiocarbamates are determined as mg CS_2/kg and refer to the total residues arising from use of any or each of the groups of dithiocarbamates:

1. Dimethyldithiocarbamates resulting from the use of ziram, metiram, or sankel.
2. Ethylenebis(dithiocarbamate)s resulting from the use of mancozeb, maneb, propineb, zinc-mancozeb, or cufraneb.
3. The use of ETM or thiram.

Note 5: MRLs cover carbendazim residues occurring as a metabolic product of benomyl or thiophanate-methyl, or from direct use of carbendazim.

Note 6: Pesticides listed in the Appendix Table 1 are highly safe, it is not necessary to set the MRLs and examine their residues.

Note 7: No residue shall be detected for the pesticides prohibited for use by the agriculture authority, unless other regulations apply. The names of such pesticides are listed in the Appendix Table 2.

Note 8: The classification of crops are listed in the Appendix Table 3.
